

PAPER SERVICES 2024

www.labaurelia.it

For seventy years, Lab Aurelia has been the specialist clinic par excellence in Rome, offering users a rapid, efficient, qualified service, attentive to customer needs. Our laboratory has cutting-edge machinery in accordance with European quality standards (ISO 9001:2015 certification) both for radiology and laboratory diagnostics.

At our center it is possible to carry out laboratory and radiology tests both privately and in agreement with the National Health System (NHS). What has always characterized our center is patient protection, to build together a 360° prevention and treatment path in all fields of diagnostics.

_ NEW OFFICE VIA BAGLIVI, 8 _ ROME

Since December 2022 LABAURELIA srl has acquired the prestigious **Baglivi Diagnostic Study**, combining skills and know-how to provide all its customers with healthcare services at the highest levels.

A **modern private healthcare facility**, with services that offer the utmost in technology and medical knowledge, to meet patient expectations with the commitment of **latest generation technological resources** to obtain the best diagnostic results.

There **new headquarters in Via Giorgio Baglivi, 8** in Rome already offers a wide range of diagnostic imaging tests from traditional radiology to ultrasound, breast surgery and MOC, as well as specialist visits in surgery, dermatology and gynaecology. New services and new specialist visits will soon be activated.

The health management of the headquarters is entrusted to Dr. Stefano Cerza and the technical direction of Radiology is confirmed to Prof. Giuseppe Panzironi, former lecturer in Radiodiagnostics at the "La Sapienza" University of Rome and at the Department of Radiological Sciences at the Policlinico Umberto I.

BAGLIVI HEADQUARTERS SERVICES

- MOLECULAR BIOLOGY AND MOLECULAR GENETICS

CLINICAL CHEMISTRY

It is a branch of laboratory medicine that deals with the study of biochemical alterations of a pathological nature and the application of chemical-instrumental and immunochemical analytical techniques to carry out diagnostic or routine determinations on biological liquids.

IMMUNOHEMATOLOGY

Immunohematology treats blood diseases linked to alterations of the immune system when the organism reacts against its own tissues and/or organs.

BACTERIOLOGY

Medical bacteriology is a branch of microbiology that studies bacteria in relation to the diseases that can derive from them.

HORMONE DOSAGES

Hormone assays allow you to measure the quantity of hormones present in the blood, to establish whether the glands that produce them (pituitary, thyroid, etc.) are functioning properly, thus identifying possible hormonal imbalances.

PRIST AND RAST

Blood tests useful to highlight an allergy and to try to identify which specific substance you are allergic to. Today at our center it is possible to perform Alex 2 which also provides an alternative diet for food intolerances to specific molecules.

TUMOR MARKERS

They are substances found in the blood, urine or cellular tissues which present a significant increase in their concentration in some types of neoplasms. A high level of Tumor Markers can therefore indicate the development of cancer, although there may be other causes of elevation of these values.

CYTOLOGICAL TESTS

It consists in the observation under an optical microscope of cells taken or naturally exfoliated from the different organs or tissues of our organism. The cells thus collected must be pairs. Fertilization techniques medically carefully "fixed" at the time of sampling and subsequently colored in the laboratory to make them visible under the microscope.

INFECTIOLOGICAL TESTS

These are analyzes to identify the presence or absence of viral forms in the body, or to monitor the effectiveness of a therapy by identifying various antibodies present.

IMMUNOCOMPATIBILITY

The HLA system includes a complex of blood group and tissue antigens, encoded by a series of genes located on the short arm of chromosome 6. From experimental observation, it is revealed that these antigens are responsible for a series of humoral and cellular reactions that lead to rejection of a transplant, hence their identification as "histocompatibility" antigens.

WORKPLACE MEDICINE

Medical branch specialized in the prevention of work-related risks.

COUPLE INFERTILITY TESTS

It includes all diagnostic tests aimed at identifying the causes of a couple's failure to conceive a child. The following are therefore carried out:

- **For her:** laboratory tests, genetic tests, vaginal swabs, pap tests, gynecological visits, ultrasounds and mammograms - mammography with tomosynthesis.
- **For him:** semen tests, sperm separation tests, DNA fragmentation tests, microbiology and virology tests on semen, genetic tests, hormonal tests, andrological examinations, urological examinations, testicular color Doppler ultrasound. Genetic counseling for infertility by

_ MOLECULAR BIOLOGY AND MOLECULAR GENETICS

It is a branch of biology that deals with the molecular mechanisms underlying life. Through sophisticated techniques it is possible to amplify DNA in order to identify genetic mutations that cause a lack of functionality of the same gene under investigation. This technique allows the diagnosis of numerous genetically derived pathologies, paternity tests, prenatal diagnosis tests, molecular oncology, pharmacogenetics, female infertility, cardiovascular pathologies, male infertility, nutrigenetics, molecular infectivity, cytogenetic tests.

MOLECULAR ONCOLOGY

Application of molecular techniques for the diagnosis of neoplastic diseases. The molecular diagnosis of tumors through DNA analysis is conducted on biological samples such as urine, feces, sputum, vaginal swab, and blood samples.

NUTRIGENETICS

It is a new discipline that brings together consolidated knowledge of nutrition, physiology, biochemistry, with new discoveries in the field of genetics and molecular biology. With nutrigenetics it is possible to develop personalized nutrition based on the individual's genetic constitution.

PHARMACOGENETICS

It is a young and rapidly evolving discipline whose starting point is the study of individual differences in response to drugs. In fact, depending on one's genetic makeup, each subject will have a certain reaction resulting from taking a given medicine.

PATERNITY INVESTIGATIONS

It is carried out to ascertain paternity by comparing DNA.

CARDIOVASCULAR DISEASES

Cardiovascular diseases are a group of pathologies affecting the heart and/or blood vessels. These represent one of the main causes of death in industrialized countries. The identification of genetic anomalies that can cause them is important for prevention purposes.

MOLECULAR INFECTIOLOGY

Molecular infectiology is the branch that deals with the molecular diagnosis of viral, bacterial and parasitic infections using gene amplification (PCR).

_ GENETIC CONSULTATIONS _ PRENATAL DIAGNOSIS

At our facility it is possible to perform non-invasive prenatal diagnosis tests.

CLINICAL ACTIVITY IN THE GENETIC FIELD

Level I and II medical genetics consultations.

Preconception consultations

Genetic counseling in oncology Counseling for infertility and repeated abortion Explanatory counseling for pre-implantation and pre-conception genetic diagnosis

Explanatory consultancy for genetic tests Family studies with reconstruction of the family tree for hereditary genetic diseases

All medical genetics consultations are carried out in collaboration with a team of psychologists subject to the patient's authorization.

PrenatalSAFE® is a non-invasive prenatal test that analyzes free circulating fetal DNA isolated from a maternal blood sample. PrenatalSAFE® provides 8 levels of in-depth analysis, thanks to which it is possible to obtain the most complete information on pregnancy available to date.

PrenatalSAFE® in fact it allows you to verify the presence of aneuploidies and microdeletion syndromes, from the most common to the rarest, of structural alterations in all the chromosomes of the fetus and

to identify mutations related to serious genetic pathologies. PrenatalSAFE®Karyo is the most technologically advanced non-invasive prenatal test currently available. By analyzing free fetal DNA (cfDNA) circulating in maternal blood. PrenatalSAFE®Karyo detects aneuploidies, fetal structural chromosomal alterations affecting each chromosome and serious genetic diseases.

PRENATALSAFE®KARYO PLUS PrenatalSAFE® Karyo Plus highlights 95.5% of fetal chromosomal anomalies detectable prenatally, and 99.1% of those found at birth, reaching a detection rate very similar to that of the traditional fetal karyotype (96.9%) and molecular (99.8%), obtained through invasive prenatal diagnosis techniques.

_ GENETIC CONSULTATIONS _ PRENATAL DIAGNOSIS

GENESAFE™

Combined with PrenatalSAFE tests® Karyo PLus provides the highest level of pregnancy information.

It is performed through the study of cfDNA, taking a blood sample from the pregnant woman with a gestational age of at least 10 weeks. cfDNA is isolated from the plasma component of maternal blood.

Subsequently, bioinformatics is used to detect mutations causing a specific genetic disease, using the innovative technology called **Next Generation Sequencing (NGS)**.

PRENATALSAFE® COMPLETE

It also detects mutations that can arise randomly in the fetus.

Also available in version "**PLUS**" for the identification of the 9 most common microdeletion syndromes, it provides the most in-depth level of information obtainable during pregnancy using non-invasive prenatal screening tests.

**PRENATALSAFE® KARYO PLUS + GENESAFE™
= PRENATALSAFE® COMPLETE**

PRENATAL ADVANCE GENETICS

It is a technologically advanced latest generation non-invasive prenatal test (NIPT) which, by analyzing free fetal DNA (cfDNA) from a blood sample of the pregnant woman starting from the 10th week of pregnancy, allows us to identify in the fetus:

aneuploidies, structural chromosomal alterations (deletions and duplications) affecting each chromosome of the fetal karyotype;

50 microdeletion/microduplication syndromes; 79 serious genetic diseases, of which:
26 with hereditary transmission
and 53 with de novo onset

_ COUPLE INFERTILITY

The difficulty of having children represents a very widespread problem in the Italian population with an incidence of approximately 15%. Providing information on couple infertility represents an educational path made up of specialist figures who offer help to all those who are trying to get pregnant, but find themselves unable to conceive.

At our center it is possible to carry out:

- Free consultations for the evaluation of couples' infertility problems with the formulation of a guided and therapeutic path towards medically assisted fertilization techniques, insemination, ICSI, IVF, gamete freezing, embryo freezing, heterologous fertilization.

COUPLE INFERTILITY CHECK-UP

(to meet your economic needs we offer the possibility of carrying out a large number of preparatory tests for medically assisted procreation techniques at a more than advantageous price)

FEMALE FERTILITY CHECK-UP (PLUS)

Fsh- Lh- Estradiol - Amh-Prolactin

Gynecological visit with Pap test

Swab for Chlamydia - Swab for Mycoplasma

Buffer mutations Thrombophilia, Cystic Fibrosis

Karyotype - Hysterosalpingography

DNA TEST THE NEW FRONTIER

Anti-aging and Regenerative Medicine is an advanced form of preventive medicine and biomedical technologies that draws directly on the four mother sciences: physics, mathematics, chemistry and biology, integrating different disciplines including food science, physiology, sports medicine, biochemistry, molecular biology, genetics, endocrinology, dermatology, psychoneuroimmunology, For to promote extending a healthy and efficient life by preventing degenerative diseases and delaying the aging process by improving and lengthening the time that separates every woman from menopause. Regenerative medicine also finds application in the complex world of women, delaying the symptoms of menopause.

LAB AURELIA MEDICAL BEAUTY

The team of doctors from the "Lab Aurelia Medical B are highly qualified and specialized in Aesthetic Medicine.

We offer treatments in a high quality environment and with maximum safety, competence and seriousness.

The Lab Aurelia Medical B plastic surgeons will evaluate with an initial visit the need for treatments to be carried out in order to correct imperfections and improve every aspect of your body, operating only in case of concrete necessity, and establishing a therapy targeted and accurate by evaluating a personalized and highly studied diagnostic path aimed at improving every aspect of the face and body.

_ AESTHETIC MEDICINE

The treatments that can be performed are:

- Facial treatment with botulinum toxin
- Facial volumizing treatment with hyaluronic acid
- Biorevitalizing volumizing treatment of the face with radiesse
- Lip treatment with hyaluronic acid (volumising/reshaping lip treatment)
- Biorevitalizing facial treatment
- Soft lifting (non-surgical) with hyaluronic acid
- Peeling (various formulations)
- PRP (growth factor) hair/facial infiltrations
- Carboxytherapy
- Face and body radiofrequency
- Body Cavitation
- Mix Cavitation and Body Radiofrequency
- Rvm Body
- Facial Electroporation
- Face+Neck photorejuvenation
- Hand photorejuvenation
- Vascular Ipl
- Ipl for Hyperpigmentation
- Ipl for face and body hair removal
- Diode 808 Laser for Face and Body Hair Removal
- Moisturizing Facial Treatments

_ SPORTS MEDICINE

Dr. Vincenzo Sartoriello

Sports medicine is a branch of medicine that deals with sport, physical exercise and related pathologies, including at a preventive level.

Sports medicine has now taken on an indispensable role in the preparation of professional athletes who often have a highly sophisticated medical staff, composed not only of a sports doctor, but also of dietitians, psychologists, physiotherapists and orthopedists.

At our center it is possible to carry out:

- sports medical examination for competitive authorization
- sports medical examination

From the untrained individual who chooses a healthy and active life to the athlete who wants to obtain ever better results, the medical-sports visit at LABAURELIA represents the reference of excellence, by virtue of the adherence to scientific criteria and the work of team of Sports Doctor, Nutritionist, Posturologist, Physiotherapist and Athletic Trainer

PERFORMANCE

SPORTS MEDICINE

- Competitive suitability certificate

- Certificate of suitability for non-competitive and non-competitive "Plus"
 - Competitive suitability certificate over 39 years
- CARDIOLOGY AND FUNCTIONAL SPORT EVALUATION
- Mono-bidimensional and color Doppler echocardiogram
 - Maximum ergometric test
 - 24-hour dynamic Holter ECG
 - Evaluation of maximum O₂ consumption (VO₂ MAX)
 - Evaluation of the anaerobic threshold
 - Incremental test with lactic acid evaluation
 - Specific tests for different sports disciplines

_ RADIOLOGY

_ RADIOLOGICAL EXAMINATION

The LAB AURELIA OUTPATIENT POLICY is one of the most sophisticated centers in the field of **DIAGNOSTICS BY IMAGES**. An excellent staff follows the patient from the beginning to the end of the exam with the help of cutting-edge machinery. Our center is accredited with the national health system for the laboratory and limited to classical radiology.

At our center it is possible to carry out:

- Cone-Beam 3D Dental Volumetric CT
- Mammography with Tomosynthesis
- Lumbar and femoral Moc
- Moc Total Body
- Lumbar and femoral MOC with TBS
- Moc and Dexa Morphometry
- Radial Moc
- Orthopantomogram
- Open sector MRI
- Pelvic/transvaginal ultrasound
- Obstetric and morphological ultrasound
- Bladder ultrasound
- Transrectal prostate ultrasound
- Liver ultrasound
- Pancreatic ultrasound
- Renal ultrasound
- Splenic ultrasound
- Abdominal aorta ultrasound
- Testicular color Doppler ultrasound
- Ecocolor Doppler epiaortic vessels
- Telecranium
- Musculoskeletal ultrasound

_PEDIATRIC CENTER

Lab Aurelia srl has developed a Pediatric Specialist Diagnostic Service to support the family pediatrician and to reduce waiting times for the public in order to offer our patients (0-18 years) a wide range of services.

In fact, in our pediatric center, as support for the family pediatrician, it is possible to carry out instrumental tests and specialist visits.

We also have a wide range of packages and checkups available for new mothers and we try to provide 360° assistance starting from prenatal diagnosis up to growth and development.

Every new mother needs a reference pediatrician who accompanies her child's development from the early stages of life up to pre-adolescence. The figure of the pediatrician is very important, especially at the beginning when you need to ask questions or ask yourself doubts several times. reports to fevers, colds, but also colic, sleep problems and weaning.

At our pediatric centre, coordinated by Doctor Alfredo Gro, specialist in neonatology and paediatrics, we give our customers the opportunity to have a reference figure even in a private setting to go to in case of need.

Our new one **PEDIATRIC CENTER** provides the possibility of using the following services:

- **PEDIATRIC EXAMINATION**
- **PEDIATRIC CARDIOLOGY**
- **EYE EXAMINATION**
- **ORTHOPEDIC VISIT**
- **DERMATOLOGICAL EXAMINATION**
- **ENT EXAMINATION**
- **ALLERGOLOGICAL EXAMINATION**
- **NUTRITIONIST VISIT**
- **DIABETIC EXAMINATION (OVER 14 YEARS)**
- **ULTRASOUND OF THE HIP**
- **(EVEN IN THE FIRST 3 MONTHS)**
- **BLOOD SAMPLES / MICROBIOLOGY**
- **PEDIATRIC COVID SWABS**

For information on costs and reservations, contact the desk or call **06/66000543**

Lab Aurelia wants to give concrete support to its customers but above all to our little patients, the children.

Given the great difficulties due to the impact that Covid has had on public structures and given the very long waiting lists, we have decided to meet our little friends by offering our help and our professionalism.

Tell us your story, we will treat your story with the utmost confidentiality and discretion and every month we will select a story that particularly struck us and we will do our best to help that child.

_SCREENING E PREVENTION

CHECK-UP

The term Prevention is usually used to highlight two different concepts, which are, on the one hand, the adoption of correct rules of life, and on the other the control of all those factors that can give rise to the appearance or progression of pathologies in so that we can intervene in time to reduce its severity.

With the aim of contributing to the prevention work that everyone can appropriately implement and in line with the progress of scientific knowledge, Lab Aurelia srl has created an innovative checkup project reserved for private customers.

This Service was also conceived in such a way as to allow the customer not only a significant reduction in time in carrying out the proposed health protocols, but also a significant economic saving.

The project "**INTELLIGENT CHECK-UP**" consists in proposing in an articulated manner diagnostic protocols aimed at effective control of the state of health.

The protocols offered can be further customized based on the individual user's needs in conjunction with the Service Coordinator Doctor. This is in order to best evaluate his current conditions and the risks he actually runs.

At the end of the check-up with a final visit for the interpretation of the reports, together with the results of the diagnostic tests carried out, the patient is given a final medical report drawn up by the Coordinator Doctor. The service is aimed not only at individual users but also at public and private bodies and is offered at discounted private rates.

- PNEUMOLOGY
- PODOLOGY
- INTERVENTIONAL RADIOLOGY
- RHEUMATOLOGY
- NUTRITION AND FOOD SCIENCES

ALLERGOLOGY

Allergology is a branch of medicine that is concerned with the prevention, diagnosis and treatment of allergies, immune pathologies characterized by hypersensitivity to particular substances and related diseases.

At our center it is possible to carry out:

- Allergy visit, Prick Test - food intolerances, Cytotoxic test, Breath Test
- Rast various allergens, Patch tests, Alex 2, specific IgE, total IgE
- Gluten intolerance

ANDROLOGY AND UROLOGY

Andrology is the branch of medicine that focuses its interest on male health, with particular reference to dysfunctions of the urogenital system. In close relation to andrology we find urology. A branch that deals with pathologies affecting the genitourinary system, i.e. kidneys, ureters, bladder, prostate and external male genital organs.

At our center it is possible to carry out:

- Spermogram with consultation and control of the report
- AIH sperm separation test
- DNA fragmentation test
- Microbiology and virology tests on seminal fluid
- Andrological visits
- Urological visits
- Genetic testing
- Transrectal Prostatic Ultrasounds
- Renal Ultrasound
- Bladder Ultrasound
- Testicular color Doppler ultrasound
- Uroflowmetry

ANGIOLOGY

Angiology deals with the study of the anatomy and pathologies that affect arterial, venous and lymphatic blood vessels.

At our center it is possible to carry out:

- Visit
- Color Doppler ultrasound of the lower limbs (venous and arterial)
- Ultrasound color Doppler upper limbs
- Ecocolor Doppler epiaortic vessels

DERMATOLOGY/AESTHETIC MEDICINE

Dermatology is the branch of medicine that deals with the skin and the tissues connected to it (hair, nails, sweat glands, etc.). At our center it is possible to carry out:

- Snow mapping
- Keratosis removal
- Specific treatments for acute, chronic and allergic dermatitis, psoriasis, seborrheic dermatitis and dermatoses
- Diagnosis and treatment of sexually transmitted diseases
- Diagnosis and removal of warts, warts and other skin lesions.

ENDOCRINOLOGY

Endocrinology is that branch of medicine

specialist that deals with the study of internal secretion glands, i.e. those in which the product is directly released into the blood.

At our center it is possible to carry out:

- Endocrinological visit
- Thyroid ultrasound
- Thyroid color Doppler ultrasound
- Thyroid hormone analysis

GASTROENTEROLOGY AND NUTRITION SCIENCE

Gastroenterology is the branch of specialist medicine that deals with the study of diseases and disorders of the gastrointestinal tract.

At our center it is possible to carry out:

- Gastroenterological and Hepatological examination
- Visit with a nutritionist for personalized diets
- Abdominal and digestive system ultrasound (stomach, duodenum and jejunal ileal loops)
- Rx of the digestive system
- H2 Breath test lactose, lactulose and glucose
- 13- C Urea test for Helicobacter Pylori
- Food intolerance test
- Alex 2

GYNECOLOGY/OBSTETRICS

Gynecology deals with the physiology and pathologies inherent to the female genital system and all other structures functionally connected to it.

At our center it is possible to carry out:

- Visit a gynecologist
- PAP test
- Vaginal swab for common germs
- Vaginal swab for chlamydia
- HPV testing with typing
- Hormone dosages with blood sampling
- Transvaginal ultrasound
- Follicular monitoring
- Videocolposcopy
- checkup for couple infertility

CARDIOLOGY

Cardiology is the branch of internal medicine that studies the anatomical-functional and pathophysiological aspects of the heart and the cardiovascular system

At our center it is possible to carry out:

- Cardiological examination
- Electrocardiogram
- Electrocardiogram under stress
- Cardiac Holter
- Holter pressure
- Cardiac color Doppler echocardiogram

OCULISTICS

Ophthalmology is a branch of specialist medicine that studies diseases and defects of the visual system and includes all the associated diagnostic investigations and therapeutic interventions.

At our center it is possible to carry out:

- Eye examination
- Orthoptic visit
- Lacrimal duct washing, tonometry, gonioscopy

ENT/AUDIOLOGY Otolaryngology is a branch of specialist medicine that deals with the prevention, medical treatment and cure of pathologies that can affect the ear, the upper aerodigestive tracts: nose, larynx, hypopharynx, nasopharynx, oropharynx, throat and neck.

At our center it is possible to carry out:

- ENT examination
- Tonal audiometric test
- Impedance test
- Vestibular audio exam
- Polysomnography
- Fiberoptic laryngoscopy

ORTHOPEDICS AND TRAUMATOLOGY

Orthopedics is the medical discipline that studies the musculoskeletal system and its pathologies. Doctors specializing in Orthopedics and Traumatology are specialized in the diagnosis and treatment of both surgical and non-surgical problems of the locomotor system. It includes: bones, joints, ligaments, tendons, muscles, nerves. At our center it is possible to carry out:

- Orthopedic visits
- Infiltration
- Infiltration with growth factors
- Radiology services

DIABETOLOGY

Diabetology is a specialist branch that deals with the treatment of diabetes and its complications by following the patient and offering medical and specialist support to keep this pathology under control. At our center it is possible to carry out:

- Diabetic visits
- Diabetes screening
- Blood tests.

PNEUMOLOGY

Pneumology is a discipline that deals with diseases related to the respiratory system. At our center it is possible to perform

- Specialist
- Spirometry
- Radiological examinations

WORKPLACE MEDICINE

Occupational medicine is the branch of medicine that deals with the prevention, diagnosis and treatment of diseases caused by exposure to risks due to work or present in the workplace. The goal of medicine of

work is to safeguard the health and safety of the worker in the workplace, to prevent occupational diseases and to avoid any type of accident in the workplace, or to improve the psychophysical and social well-being of workers of all professions.

At our centre, it is possible to carry out this procedure in accordance with the provisions of the Legislative Decree on workers' safety. 81/08

- specialist visits for occupational medicine

BREAST LOGIC

Senology is the branch of medicine that studies breast diseases

At our center it is possible to carry out:

- Breast visits
- Breast visits performed by a breast oncologist
- Digital mammography with tomosynthesis
- Breast ultrasound
- Left/Right breast cytology
- Breast self-examination training

_ OUR PACKAGES OF SCREENING

LabAurelia has created prevention packages for the well-being of the whole family:

- AUDIOLOGICAL SCREENING
- DIABETES SCREENING
- ENDOCRINOLOGICAL SCREENING
- GYNECOLOGICAL SCREENING
- OSTEOPOROSIS SCREENING
- BREAST SCREENING
- UROLOGICAL SCREENING
- DIZZINESS SCREENING
- ORTHOPEDIC SCREENING

DIABETES PREVENTION

Diabetes is an alteration resulting from a metabolic decrease in insulin activity. In particular, diabetes may be due to a reduced availability of this hormone, an impediment to its normal action or a combination of these two factors. A characteristic always present in diabetes mellitus is hyperglycemia, which over time tends to be associated with some complications of the blood vessels: macroangiopathy and microangiopathy (i.e. alterations in the circulation of small arterial vessels which become particularly evident in retina, kidney and nerve), which is instead specific to the pathology.

DIABETES SCREENING:

• ECG, Doppler ultrasound, ocular fundus, neurological VIS
Price €180

THYROID PREVENTION

The thyroid is an unequal, median endocrine gland located in the anterior region of the neck and is made up of two lobes, right and left, joined by a narrow bridge called the isthmus. Functionally it has two endocrine components: the first produces thyroid hormones (T3 and T4), the second calcitonin. The thyroid is a gland of fundamental importance for our physiology and periodically checking its functionality is essential for prevention.

ENDOCRINOLOGICAL SCREENING:

- **Endocrinological visit Thyroid ultrasound**
Tests ft3, ft4, tsh
Price €150

PREVENTION FOR WOMEN

Our Laboratory pays great attention to the prevention of pathologies related to the female genital system and breasts. Among the most common pathologies affecting the female genital system we find vaginal candidiasis and HPV, better known as papillomavirus and considered one of the possible causes of cervical cancer. Our packages are designed for women who wish to have an in-depth diagnostic examination with the certainty of competence and punctuality.

BREAST SCREENING:

- **Breast ultrasound, mammography with tomosynthesis, breast examination** **Price €195**

GYNECOLOGICAL SCREENING:

- **Gynecological examination, pap test, HPV swab**
Price €190

PREVENTION OF OSTEOPOROSIS

The word osteoporosis refers to a condition in which the skeleton is subject to loss of bone mass and resistance caused by nutritional, metabolic or pathological factors. The skeleton is therefore subject to a greater risk of pathological fractures, following the decrease in bone density and changes in the microarchitecture of the bones.

OSTEOPOROSIS SCREENING:

- **Endocrinological visit, lumbar and femoral Moc, vitamin D, creatinine**
Price €145

UROLOGICAL PREVENTION

Urology is a specialized medical and surgical branch that deals with pathologies affecting the genitourinary system, i.e. kidneys, ureters, bladder, prostate and external male genital organs.

UROLOGY SCREENING 1:

- Urological examination, prostate or bladder ultrasound, uroflowmetry

Price €170

UROLOGY SCREENING 2:

- Urological examination, Uroflowmetry, Prostate Ultrasound
or bladder, Renal Ultrasound

Price €190

PREVENTION OF SLEEP DISORDERS

At our center it is possible to perform the Polysomnography test, a test to diagnose sleep disorders and improve rest.

Checking: The regularity of breathing, the heartbeat and the change of position (highlighting the apnea phases and their duration).

WatchPAT is the innovative wrist device, approved by the FDA and CE marked, for the diagnosis of sleep breathing disorders (OSA). It is a small device mounted on the wrist

which allows you to carry out the exam in your own home and in complete comfort.

SCREENING WITH WATCHPAT:

Tool including the final visit with our pulmonologist specialist.

Price €300

ORTHOPEDICS/TRAUMATOLOGY:

For the evaluation of possible traumas and fractures. At our center it is possible to carry out:

ORTHOPEDIC SCREENING 1:

- Specialist orthopedic visit
+ Magnetic resonance imaging of a joint segment

Price €160

ORTHOPEDIC SCREENING 2:

- Specialist orthopedic visit
+ MRI of the cervical or lumbar spine
- Price €190**

_ SAMPLES AND RADIOLOGY HOME

SAMPLES AND HOME RADIOLOGY

COVID-19 TESTS

Our center offers the possibility of carrying out samples and radiological tests at home

IN ALL AREAS OF ROME every day from

Monday to Friday

from 8:00 to 20:00; on

Saturdays and Sundays

from 8:00 to 13:00

For information and appointments call:

06/66000543

335 7211096 (Home sampling) 392

049 1482 (Home radiology)

Head of Home Collection Service: Mr.

Romina Peloso

Head of Home Radiology Service: Mr.

Daniele Costantini

_PARTNERSHIP

Monzino is a scientific hospitalization and treatment institute with a great specialization: the heart and its vessels. It is part of the IEO-Monzino group: two excellences in the major pathologies of the Western world, which reinvest all their profits in Research and Innovation.

The Monzino Cardiology Center was born in 1981 from a donation from the Cav.dellavoro Dr. Italo Monzino and from the original idea of Prof. Cesare Bartorelli, of the University of Milan, who thought of creating the first hospital in Europe dedicated exclusively to the treatment of cardiovascular diseases. Today it is part of the IEO-Monzino group: two excellences in the major pathologies of the Western world, which reinvest all their profits in Research and Innovation.

Monzino is accredited and has an agreement with the Lombardy Region and offers hospitalization and outpatient services under the National Health Service (SSN).

In 1992, it became the first Scientific Institute for Hospitalization and Care (IRCCS) in Italy with an exclusive cardiovascular vocation. As an IRCCS, Monzino pursues research purposes, mainly clinical and translational, in the biomedical field and in the organization and management of health services, together with highly specialized hospitalization and treatment services for cardiovascular diseases.

The European Institute of Oncology (IEO) was born from an idea by Umberto Veronesi and was inaugurated in May 1994; two years later it became the Scientific Institute for Hospitalization and Care (IRCCS). External IEOs The European Institute of Oncology, a scientific hospital and treatment institute, is a "comprehensive cancer centre", with "non-profit" purposes, active in three areas: Clinical, Research and Training.

The IEO aims to achieve excellence in the field of prevention, diagnosis and treatment of tumors through the development of scientific clinical research and organizational and management innovation in a context of constant attention to the quality of the service provided to the people assisted. The values and principles that inspire and guide the operators of the Institute are:

- Centrality of the assisted person
- Continuous improvement of the quality of care
- Service excellence
- Multidisciplinary approach to clinical aspects
- Development of experimental research with rapid transfer to patients
- Enhancement of human resources
- European spirit and openness to international collaborations

OPENING HOURS

OF THE OUTPATIENT POLICY

AND RADIOLOGY:

FROM MONDAY TO SATURDAY

FROM 7:00 AM TO 8:00 PM
